The analysis of the water states that the quality of the water will be all right provided the seepage is prevented. This to be done the alalyzers suggest that the first eighty-three feet of the well be cased off, so that no surface water or water obtained at a less depth than the eighty-three feet can be pumped. This, according to the analysis will give five strata of water to pump from, all below a depth of eighty-three feet and below the lime rock. The council has notified Mr. Geo. Herder, owner of the water and light plant, of the changes to be made and has instructed him to make said casings within ten days.
