

Miss Maria Francine Bures Weds Gary Allen Cranek

She wore a gown of tulle... featuring an empire line above an appliqued bodice and a high neckline.

The bride's matching fingertip length veil was attached to a headpiece of similar appliqued flowers.

Surviving are his wife, Frances, of Nada; two sons, Raymond and Alan; and a daughter, Linda Sablatara.

Mr. and Mrs. Gary Allen Cranek. The bride is the daughter of Mr. and Mrs. Eugene A. Bures of El Campo.

Officiating were The Rev. Les Vance and the Rev. Anthony Matula of Sacred Heart Catholic Church at El Campo.

Last Rites At Nada Feb. 7 For Jim Safer

Funeral services were held at 10 a.m. Thursday, Feb. 23, at St. Mary's Catholic Church in Nada for James R. Safer.

The Rev. Henry Roll, pastor of St. Mary's, officiated at the services.

A rosary was recited at the funeral home which was in charge of arrangements.

Surviving are his wife, Frances, of Nada; two sons, Raymond and Alan; and a daughter, Linda Sablatara.

Mr. Safer was born Aug. 28, 1905 in Industry and was 72 years old.

Guests were assisted in registering by Miss Karen Franke of Karnes City and Miss Renee Schneider of Garwood.

Following the wedding dinner, there was a dance. Mr. and Mrs. Edward Kornek of Garwood led the grand march.

After the wedding trip to Colorado, the newlyweds will reside in Garwood.

Ushers were Bruce Nardus, Anthony Mahalic, Sivan Duhos and Mark Bures, the bride's brother.

Officiating were The Rev. Les Vance and the Rev. Anthony Matula of Sacred Heart Catholic Church at El Campo.

HOSPITAL NEWS NOTES

Patients this week (Feb. 8) Miss Linda Mathis, city; James Gordon, Jr., city; Miss Roberta Diaz, city; Bill Samora, city; Mrs. Jewell Law, city; A. C. Henry, city; Connie Jones, city; Miss Barbara Jean Thomas, city; Mrs. Georgia Clements, city; Mrs. Mary Anderson, city; A. N. Sasholm, city; T. A. Norris, city; Mrs. Daisy Sims, city; Mrs. Freeman, city; Mrs. Linda Shorter, city; Mrs. Esther Moore, city; Mrs. Lorena Miller, Nada; Mrs. Leontine Zubick, Cat Spring; Anton Kocurek, Garwood; Geo. Schmeckle, Cypress; Edwidge Torres, Kenedon; Cele Aycock, Kenedon; Mrs. Felicitas Ruiz, Llanas; Lester Goehring, Round Top; Mrs. Betty Erms, El Campo; Albert Olms, Rock Jarlan; Mrs. Shirley Bush, Wharton; Mrs. Arvilla Creech, Rockdale; Mrs. Lois Houston, Brexham; Mrs. Ona B. Hearings Held On Proposed Tax Reform

By Cong. J. J. Pickle The House Ways and Means Committee, of which I am a member, began hearings on the President's proposals for tax cuts and tax reform last week with Administration witnesses presenting the details of the plan.

The proposal contains tax cuts in three areas - personal income taxes, business taxes and excise taxes - and a wide range of tax reforms.

The proposed individual tax cuts include a reduction in the tax rate and replacing the present personal exemption and personal tax credit with one \$240 tax credit for each person.

For business, the Administration proposes reducing the tax rate on corporate income and making the present 10 percent investment tax credit payment. The investment credit would also be expanded to cover more areas of expenditures. Also, there is a proposal for reducing the unemployment insurance tax rate paid by employers.

A variety of tax reforms are being considered. A major program, most of the provisions of the proposal would go into effect on October 1st of this year. Even though the committee has gotten off to an early start on the tax package there will probably not be any specific action soon. The tax bill will probably have to wait until the committee has completed work on several other pending tax matters, the reform bill and the welfare reform bill.

I am not ruling out the possibility of a need for some kind of cuts but right now I would be satisfied to just let the economy run by itself for a while. We should also keep in mind that a \$34 billion tax cut means \$34 billion in reduced revenue for the government and thus a higher budget deficit.

What's fun to reflect on pretty girls, handsome men, glitter, glamour, spectacular show sets with musical scores. It's all there in the newest edition of Holiday On Ice, "Reflections on Ice" that opens at the Summit in Houston on Wednesday, February 22nd for eight performances through Sunday, February 26th.

Pair skating, adagio on ice, romantic, sweeping solos and side-splitting comedy routines for youngsters of all ages. The all new edition of Holiday On Ice combines this potpourri into a delightfully exciting and refreshing production. It's like you've never seen it before!

Tickets are now on sale at the Summit box office and all seven Foley's Ticket Centers. Regular prices are \$4.50, \$5.50 and \$8.50 for Saturday evening show at 8:00 p.m. and both Sunday shows at 1:30 p.m. and 5:30 p.m. KTRG-TV is sponsoring three special Bargain Shows on Wednesday at 7:30 p.m. and also on Saturday morning at 11 a.m. Ticket prices for

these bargain shows are \$2.75 and \$3.75. Lastly, two special Family Shows - ticket prices of \$3.75 and \$4.75 - will occur on Friday at 8:00 p.m. and Saturday matinee at 3:30 p.m.

A perfect gift - a subscription to the Eagle Lake Headlight. Call 234-2773

Because of restrictions placed on the use of natural gas, Central Power and Light Company must turn to other fuels for production of electricity.

The Texas Railroad Commission ruled nearly three years ago that delivery of natural gas used for electricity would be curtailed - 10 percent by 1981, and 25 percent by 1985. Also, the Public Utilities Commission of Texas has said it will not approve construction of any new gas-fired electric generating plants.

To insure that our customers would continue to have a reliable supply of power, we started making plans more than seven years ago for this switch to other fuels. By the mid-1980's about 40 percent of our electricity will come from coal-fired and nuclear plants.

Colton Creek Power Station, our first coal-fired unit, is under construction and will begin supplying power by late 1979. CPL also has a 25.2 percent share in the South Texas Project, a nuclear plant being built in Matagorda County. The first unit will go into operation by late 1980, the second in 1982.

Because they are more complex, nuclear and coal-fired plants are more expensive to build than gas-fired plants and require more stringent safety and security measures. Rigorous environmental protection and safety systems add to the cost of these plants. Transporting huge quantities of coal over long distances is still expensive.

Inevitably, power production will cost more in the future than it has in former years. We must, however, build the new plants; we have no choice if we are to maintain a supply of power that will be available to you whenever you need it.

Electricity is a basic utility. It is essential to our way of life. We must build the new plants; we have no choice if we are to maintain a supply of power that will be available to you whenever you need it.

Jewel Williams To Wed James L. Revis On March 4th

Burns Williams of El Campo and Mrs. Lillian Williams of this city are happy to announce the engagement and approaching marriage of their daughter, Jewel, to James L. Revis, Miss Williams, a 1973 graduate of Rice High School, is now a senior at the University of Houston, majoring in Accounting. James, a resident of Houston, is a graduate of New Mexico State and is now employed at The Container Corporation of Houston, Texas in the sales department. The joyous occasion will take place on March 4, 1978 at 6:00 p.m. at The South Point Baptist Church in Garwood, Texas, with a reception following at the Eagle Lake Community Center.

grandson of Mrs. Lydia Jochec, all of East Brexham.

Jimmy and Delores Jochec of East Brexham proudly announce the arrival of their first born, Jacob Louis Jacob, tipped the scales at seven pounds and two ounces and measured 20 inches upon his arrival on January 6th, 1978 at 7:08 a.m.

Mark White Files For Atty. General

Mark White Friday paid his \$1,500 filing fee to State Democratic Party officials as a Democratic candidate for Attorney General.

White resigned as Secretary of State in October, 1977, to make the race. He was appointed to that position in January of 1973.

Before being the state's highest appointed official, White practiced as a private attorney and served as an Assistant Attorney General.

January Cattle Market Thrives On Cold Weather

During January, stagnant weather mixtures of drizzle and ice, and temperatures hovered South and Central Texas.

The movement of cattle thereby curtailing market receipts. However, conditions of cattle remained fairly good because mild weather during the close of 1977 enabled livestock to enter the new year with some strength and condition.

Slaughter cows totaled 14, to 17 percent of the month's total receipts. At January ended, slaughter cows numbered 800 per hundred pounds or better became more of a commodity.

Many Texas calves were retained fairly good because mild weather during the close of 1977 enabled livestock to enter the new year with some strength and condition.

Local Farmers Hear Discussion On Use Of Cytozyme Products

A number of area farmers and others interested in agricultural allied businesses heard a discussion on the use of Cytozyme products at a dinner meeting at the Restaurant on Tuesday night of last week.

Dr. Pete Getty, director of marketing and research from Salt Lake City, Utah; Bill Garrio, regional representative from Grand Junction, Colorado; and R. C. (Dick) Stewart of Lubbock were on hand to discuss the use of Cytozyme products to stimulate growth and increase production in rice and soybeans.

Cytozyme manufactures biochemical enzyme products for application to seeds, plants, trees and other plant tissue and, on occasion, to soils.

Dr. Getty told the gathering that the typical fertilizer elements - nitrogen, phosphorus and potassium - are converted by enzymes in existing biochemical organisms in the plant into basic tissue building blocks. He added, however, that the limiting factor in the utilization of fertilizing compounds is the availability of these biochemical organisms to make these conversions for specific plant growth processes, thus resulting in inefficient use of the chemical fertilizer.

Cytozyme research has solved this dilemma with last week's market at the sale at Columbus Livestock Company on Thursday of last week. The firm handled 601 head of cattle.

Good to choice butcher calves sold \$7 to \$7.50, commercial packer bulls sold \$5 to \$5.50, heavy Hereford and Angus steer calves went \$4 to \$4.50 and heifers \$3 to \$3.50. Good stocker cows and heifers sold \$200 to \$250 per head. No. 1 hogs went \$4 to \$4.50 and lambs \$3 to \$3.50.

The speakers noted that Seed Treat Plus is available in powder and liquid forms and is said to bring about higher germination rates, an earlier and more vigorous growth and more rapid maturation.

The Crop-Plus is a foliar spray applied to the emerging stage of growth when there is sufficient leaf cover for efficient foliar absorption and the officials cited that use of Crop-Plus results in healthier, more vigorous plants, greater

of soybeans, which increases their ability to utilize atmospheric nitrogen as a nutrient, is increasing yields in many arid areas of the Southwest as well as in new soybean land along the Gulf Coast.

The Texas Agricultural Experiment Station, cooperated with Federal and other state agencies in developing improved strains of rhizobia suited to inoculate soybeans for nitrogen fixation.

Increasing production of this valuable crop benefits the whole State economy in a number of ways: it's a needed crop, both at home and abroad, as a human food and animal feed; it's in demand in international markets and a plus factor in our balance of payments; and it fits in nicely with many crop rotations in the State.

This valuable "new" crop adds another needed dimension to the rich and varied agricultural output of Texas producers.

Editor's Note - Any questions regarding this column should be addressed to Science Writer, Dept. of Agricultural Communication, Texas A&M University, College Station, Texas 77843.

Colorado County soybean yields in 1977 were generally disappointing due to low rainfall during critical stages of development. Area farmers lucky enough to get rainfall at the proper time did produce yields as high as 45 bushels per acre.

Studies at Texas A&M's Research locations are continuing in an effort to improve yields of soybean on the soil and weather conditions of Colorado and surrounding counties. Despite the poor crop in 1977, soybeans still have the best promise of a rotational crop with rice. As land and other costs continue to rise, area farmers must utilize intensified cropping systems to maintain economic income. Soybean and rice well together in an intensified rotation system.
