Stay alert and stay clear—

AVOID POWER LINES

Putting up the antenna for your TV set or for the base station of your CB radio can be dangerous unless you take certain precautions.

Plan the project carefully if you install the antenna yourself. First, know where all the power lines are—then stay well away from them. Any contact between a power line and you or your antenna can be serious.

Make sure you locate your antenna (including the supporting mast and guy wires) at least one and a half times its total height from all power lines. For example, an antenna 30 feet high should be 45 feet away from power lines in all directions.

Don't use a ladder near power lines—during an antenna installation or while performing any other task. The danger from using a metal ladder can conduct electricity, too, if it's damp or if it has dirt or paint on it.

Electricity brings a more comfortable life to all of us, but it must be treated cautiously. Stay alert—and stay clear of power lines!
