Volunteers needed for multiple sclerosis camp

The Multiple Sclerosis Society, Southeast Texas chapter, is planning a week of summer camp next May for persons who have multiple sclerosis, a debilitating disease of the central nervous system. Scheduled for Sunday, May 15 through Friday, May 20 at Camp Munson in Friendswood, Texas, not far from NASA, activities will include all the fun camping and recreation programs that are usually available at a summer camp for kids.

Volunteers are needed as counselors, craft coordinators, for entertainment and many other areas, and if anyone is able to assist the Multiple Sclerosis Society for all or part of the week of May 15, they are asked to call the MS Society in Houston at (713) 526-8967 or 1-800-323-4873.

Some activities planned for this week of fun and relaxation for persons who have MS include archery, riflery, swimming, crafts, horseback riding, games, wheelchair square dancing, a hayride and bonfire.

Skills needed to assist disabled people will be taught at training sessions for volunteer counselors and aids, who will stay overnight in the camper cabins which are air conditioned. Meals and snacks will be as all linens are provided, and the week of assisting disabled people learn skills in the out-of-doors will be extremely rewarding. Many persons with MS who will be attending the camp have not been away from home overnight since becoming disabled, and the joy of being in a camp environment will be very meaningful.

The rewards of helping people who have lost much of their mobility are worth the week of volunteering, and if you are interested, you are urged to plan now to assist the MS Society in this meaningful week in May.

Fall fruit tree spraying controls diseases

Fall is often the time when fruit tree care is forgotten or neglected, but it's a critical time for controlling many peach and plum tree diseases to insure a good crop next year.

With the arrival of fall, there's often a tendency to forget our peach and plum trees that served us so well last summer.

Applying a copper fungicide now can stop or reduce three of the major diseases that attack peach and plum trees in Texas. These are peach leaf curl, bacterial leaf spot and bacterial canker.

Puckered and distorted peach tree leaves that were either bright red or light green in diseased areas last spring were due to peach leaf curl fungus. The only time to effectively control this disease is in the fall with a copper-containing fungicide.

Timing of the fall spray is critical for effective control and for avoiding tree damage. Copper is a metal and may cause severe defoliation unless applied correctly.

Spray when 70 percent of the leaves fall off the tree. Spraying too early will cause leaf shed or cause the spray to be ineffective later.

Fungicides containing chlorothalonil can also be used for the control of peach leaf curl.

Bacterial leaf spot and bacterial canker can be partially controlled by fall spraying with a copper fungicide, but not fungicides containing chlorothalonil. But again, it's important to spray at the right time to prevent foliar burn with the copper fungicide.

Meet the Rice Raiders

By JENNIFER MATTHEWS

This week's Raider in the spotlight is Vance Corman, son of Wayne and Brenda Corman of Eagle Lake.

Vance, wearing jersey number 22, is a 5'10", 155 pound senior and plays defensive end and split end for the varsity team. His hobbies include water skiing, snow skiing and hunting, and he also is an active member of Rice's track team.

Vance says he's not sure what happened to the team this year, but leadership was one of their weakest points. When asked how he felt about this being his last year, he said he was kind of glad because he was ready to move on, but that he hopes next year's team will be successful.
