School Board

Continued from Page 1

The Gifted and Talented, Drug and Chapter 1 programs are in place on each campus. Garwood and the Eagle Lake Primary School are establishing libraries where parents of Chapter 1 students can check out educational materials in order to work at home with their children.

Larry Varley praised the staff at Sheridan for the tremendous job it is doing in the areas of parent communication and involvement and remediation of weaknesses.

Certificates were presented to those teachers who prepared and pre-

sented Chapter 1 parent workshops during the year. Those receiving certificates were Darnell Varley, Betty Janish, Cynthia Boenisch, Carol Pavlicek, Marie Argo, Charlene Lawson, Christina Roy, Rose Ann Carpenter, Annie Ondrusak, Kathy Kovar, Cathy McGaughey, Jeanette Woods, Connie Hinz, Fran Hovovsky and Lynda Appie.

The board set May 6 to canvass election returns, approved a policy concerning an advisory council to consist of parents, community residents who are not parents of school

students, professional staff, and non-teaching employees, that will formulate district instructional goals and objectives and campus performance objectives, and announced that Superintendent Carolyn McGaughey had been elected to the Texas Association of School Board's Executive Committee of School Administrators.

The board went into executive session to communicate with the superintendent with no action being taken upon re-convening into open session.

Pasture management important

By Soil Conservation Service Personnel

Now is the time to start thinking about properly managing improved pastures of coastal bermudagrass, common bermudagrass, gordo bluestem or pensicola bahia grass.

These grasses are different from native range grasses since they require more attention than the range grasses. These grasses, as listed above, produce vast quantities of forage when properly fertilized, properly grazed and when weeds are controlled.

For example, coastal bermudagrass when fertilized at a suggested rate of about 100 pounds of nitrogen per acre, 40 pounds of phosphorus per acre, and 40 pounds of potash per acre will produce enough forage to run one cow-calf unit on 3 acres during the growing season. This, of course, is a suggested guide for application of fertilizer for grazing production.

A soil test will also indicate fertilizer needs, if you desire to find out exactly what your fertilizer needs are.

Watch Grazing Heights

Grazing heights on these grasses should be watched closely so that overgrazing does not occur. Coastal bermudagrass should be allowed to reach a height of about 4 inches and should be maintained all during the

Pays Off

Proper grazing heights on the grass, timing and application of proper fertilizer rates, and rotation of

growing season. The grazing height on common bermudagrass should be maintained at about 3 inches, and on pensicola bahia grass at about 3 inches. Gordo bluestem should be grazed no closer than 6 inches to maintain a vigorous plant and root system. Gordo bluestem and pensicola bahia grass should also be allowed to make at least one seed crop each year so that new plants can grow for future production.

World Market Price
The World Market Price (\$5-70) as of Tuesday, April 9 remained at \$6.04.

This has reduced Mexico's need for U.S. rice.

U.S. has recently sold 22,000 tons of rice to Poland and Jamaica. It has been slow from the standpoint of sales. Rough rice is moving slowly. Locally our rice market has improved in the past week.
