HAPPY BIRTHDAY MOTHER!

Ruby Arlene Tyler Willis Henry

(March 22, 1917 - November 19, 2005)

Today is your 91st birthday, without candles and a cake. And since you are not here with us, we will not celebrate. We cannot send you a card, a kiss or a hug, see your smile, hear your voice or feel your touch. So we ask God to give a message to the one we love and miss so much. And grant us one wish, and make it come true - to have His choir of angels sing "Happy Birthday" to you.

Happy 91st Birthday Mother, With love in our hearts, then, now and always: Carol and Raymond Horn Jimmy, Betty and Margie

Union Pacific Urges Spring RR Safety

For thousands of families and college students, the months of March and April signal holiday vacations and Spring Break trips. Union Pacific (UP) Railroad reminds motorists and pedestrians to use caution during this busy time.

Union Pacific urges travelers - motorists and pedestrians alike - to take the extra time and use caution when crossing railroad tracks and at grade crossings, and to please stay away from railroad property.

It is essential to practice safety at highway-rail grade crossings and to heed the warnings of automated crossing gates, flashing signals, stop signs, yield signs and crossbuck signs. When traveling near the railroad, please remember these important safety guidelines:

- * Never walk along tracks and only cross tracks at designated pedestrian roadway crossings when on foot.

- * Observe and obey all warning signs and signals.

- * At a multiple track crossing waiting for a train to pass, wait for a second train on the other tracks, approaching from either direction, before proceeding.

- * Do not be fooled; the train you see is closer and moving faster than you think. If you see a train approaching, wait for it to go by before you proceed across the tracks.

Does Epstein-Barr Virus Cause Mononucleosis?

Epstein-Barr virus is the name of a virus that causes infectious mononucleosis (commonly referred to as *mono*). This condition most commonly affects young adults and adolescents, although younger persons also may be affected. Many persons have been exposed to the Epstein-Barr virus and have experienced a build up of antibodies to the virus. Most people by the age of 35 have become immune. Signs and symptoms of mononucleosis include fatigue, weakness, fever, skin rash, and night sweats. This virus is transferred from person to person through saliva, however is not as contagious as the common cold.

There is no specific treatment for infectious mononucleosis. Persons affected by the Epstein-Barr virus may also be affected by bacterial infections which require treatment with antibiotics. Although antibiotics are not used to treat the virus, when other infections that are caused by bacteria are present, antibiotics may be prescribed. Ampicillin (*Principen*), amoxicillin (*Trimox*), or amoxicillin and clavulanate (*Augmentin*) may be prescribed for bacterial infections, such as a streptococcal infection. A steroid, such as *prednisone*, may be prescribed to alleviate swelling of the throat in persons who are also affected by tonsillitis. Adequate rest and fluids are main treatment recommendations.
